Jaw Crusher

Jaw crusher is a type of effective and energy conservation crushing machinery. We supply various types and sizes of high quality designed using advanced technologies. The Jaw crushers we supply can be used to crush different kinds of ore material for both coarse and fine crushing. The series have a complete range of specifications, with feeding size range of 125mm to 750mm, It acts as a first choice of primary crushing.

Capacity: 20-150T/H

Notice: this capacity is mean value, and the specific production capacity is subject to clients' actual equipment configuration.

Raw Materials:

Limestone, river gravel, rocks, bluestone, cobblestone, weathered sand, basalt, granite, quartz, diabase

Applications

Mining, smelting, building material, highway, railway, water conservancy and chemical industries
